Banque Pour Le Commerce Exterieur Lao Public and BCEL-KT Securities Co., Ltd. have officially launched the Mobile Trading System (MTS) through the BCEL One Application.

On the Afternoon of Thursdays, October 02, 2025

Banque Pour Le Commerce Exterieur Lao Public (BCEL) and BCEL-KT Securities Co., Ltd. have officially launched the Mobile Trading System (MTS) through the BCEL One Application, which was held at 15:00, at the Souphatra Hotel in Vientiane Capital.

Distinguished attendees included **Mr. Soulivath Souvannachoumkham, Deputy Minister of Finance - the Chairman of BCEL's Board of Directors; Mr. Soulisack Thamnouvong, Deputy Governor of the Bank of the Lao PDR;** along with representatives from the LSCO, LSE, BCEL Board members, Securities companies, BCEL shareholders, domestic-international investors, clients from both BCEL and BCEL-KT, and media representatives from various sectors.

In 2024, BCEL and BCEL-KT initiated a partnership to create the MTS with the following primary goals:

1) Instant Buy-Sell Orders, allowing customers-investors to independently place real-time buy-sell stock orders via the BCEL One app.

2) Enabling customers to access their stock account information at any time without the need to contact securities firms or use traditional computer programs.

3) Promoting investment and enhancing stock trading among both local and international investors in the Lao Securities Exchange.

Mrs. Saysamone Chanthachack, the Managing Director of BCEL, stated that the development of MTS was carried out entirely by in-house developers from BCEL, who have the expertise to create various functions of the BCEL One and demonstrate the ability to manage systems using domestic personnel and the potential to independently expand products. MTS will be a crucial "accelerator" for investment in the Lao capital market. This system represents more than just an additional trading channel - it constitutes a transformation of the Lao capital market toward digital accessibility, real-time trading, and supports the government in the digital economy transitions.
